TREK TECHNOLOGIES SHOTPOD

A stable rest for shooting or glassing through high-power optics is often hard to find when you are stalking game on a mountain. Now you can have such a stable brace for both glassing and shooting always at your fingertips with the new ShotPod created by Trek Technologies and marketed by Swarovski Optik. Best of all, it becomes a useful, rugged walking staff when not being used to stabilize your gun or spotting scope. The ShotPod is made from aluminum alloy and polymer materials and weighs just 29 ounces. It includes a fully integrated fold-out tripod base for excellent stability and the height range adjusts from 43 to 60 inches. With the cork palm rest, use it as a handy staff to climb mountains or ford streams. When you spot game, it's easy to quickly fold out the tripod base and slip on one of the two adapters to turn it into either a spotting scope stand or a rifle rest.
