

# What's New with TrekPod *Go!*

- 1) Fits in airline-approved carry-on luggage; approximately 23" long in case! (#1 customer request!)
- 2) Travel case with padded shoulder strap included.
- 3) Introduces MagMount AR/i which adds anti-rotation (in the portrait mode) and indexing (in 30° increments in the landscape mode) features to the MagMount system. The AR/i MagAdapter also incorporates new "screw-down" functionality, which allows the MagAdapter to be tightened to the camera body with the included 3mm allen wrench, further guarding against any slipping and/or loss.
- 4) Telescopes to a 4" shorter length in the hiking staff mode which accommodates shorter users (grip is now 33"-40" from the ground, as opposed to 37"-44" with current TrekPod), and works even better in the seated position (tripod and monopod).
- 5) Weighs 1 ounce less than TrekPod (in other words, no weight gain even with the new features and functions). Uses foam grip and polymer palm rest.
- 6) Includes "soft touch" rubber over-molds on all three locking nuts for significantly improved ease-of-use and comfort. (customer request)
- 7) Includes "captured" palm rest on flexible lanyard (customer request).
- 8) MSRP \$199.99 .vs original TrekPod with optional travel case at \$179.98
